# AI agents in the next 12 months (Nov 2026 to Nov 2027)

What is already dated for AI agents from November 2026 through November 2027: coding agents, computer use, harnesses, and regulation, including the August 2027 EU sandbox date and the MCP deprecation window through July 2027. Checked November 7, 2026.

Last updated November 7, 2026

From November 2026 through November 2027, the public record is a short list of things a company, a standards body, or a government has already dated, plus a handful of phrases with no day attached. Anthropic filed an amended prospectus on November 2. Apple's auditors signed the Form 10-K on November 3. AWS, Sysdig, DeepSeek, Tencent, and Citrix posted on November 3 and 4. Singapore's Ministry of Digital Development and Information published a speech on November 5. The European Commission's AI Act timeline names December 2, 2026, and then August 2, 2027.

The six-month agents report stops at May 2027. This page adds the second half. Past May, the dated marks are July 28, 2027, when four MCP features become eligible for removal; August 2, 2027, when EU member states should have a national AI sandbox; and September 30, 2027, the last day of the span in which Anthropic says about $69.8 billion of commitments are due. Annex III high-risk rules are December 2, 2027, after this window. June, October, and November 2027 have no dated launch in this source set.

Shopping and payments are in the separate report AI shopping agents in the next 6 months. This page does not repeat that checkout record. Scores for coding harnesses are in the November harness benchmark. A month with no dated launch is left empty on purpose.

## How a claim is sorted

Announced means a linked filing, company page, protocol changelog, official timeline, or parliamentary page says it.

Likely means that page aims the work at this twelve-month stretch and does not name a day. The word means "their phrase covers these months." It is not a new odds estimate from this desk.

Watch for means a later check should confirm the item or drop it: the page withholds a date, the tense is future, or a follow-up named earlier was not confirmed on November 7, 2026.

## Announced

Anthropic's amended S-1, filed November 2, 2026, describes Claude Code as the coding agent already in market and Claude Cowork as a research preview from January 2026 that, as of September 30, 2026, had outpaced Claude Code's adoption at the equivalent point. The quarterly table shows revenue of $16,956 million and an operating loss of $567 million for the three months ended September 30, 2026. Nine-month revenue is $33,242 million and the operating loss is $1,260 million. The same nine months show a net loss of $104.0 billion, of which $94.3 billion is a fair-value change. Aggregate purchase commitments and leases are about $895.4 billion. About $69.8 billion is due in the 12 months after September 30, 2026, a span that ends September 30, 2027.

OpenAI's computer-use guide, read November 7, covers macOS and Windows with ChatGPT Work and Codex. It does not mention Linux. Anthropic's computer-use toolset computer_toolset_20260801 gives Claude 17 member tools. The page lists it as available on the Claude API, Google Cloud, Claude Platform on AWS, Amazon Bedrock, and Microsoft Foundry for current models, and as not available in Claude Managed Agents.

Tencent's November 4 post says Hy4 can use a command line and a graphical interface. The API is live. WorkBuddy and CodeBuddy are free from November 4 through November 15. The TokenHub discount runs through December 31, 2026. The corporate post prints approximate catalog prices of US$0.90, US$2.70, and US$0.045 per million input, output, and cached input tokens.

AWS posted on November 3 that WorkSpaces for AI agents now supports Linux and Windows 11 cloud desktops in addition to Windows Server. Sysdig announced general availability of Sysdig AI Defense on November 4, for macOS and Windows. Citrix's November 4 post says SecurSpaces updates are generally available, and that SecurAccess updates will be available by the end of November, without naming a day. DeepSeek Harness v0.2.2-rc.1 was released November 4 and was still the newest release on November 7. The README still says developer preview. Harmony Harness, arXiv 2610.15150, submitted October 10, 2026, is a research paper, not a product announcement.

The MCP deprecated-features registry for the July 28, 2026 specification says Roots, Sampling, Logging, and Dynamic Client Registration become eligible for removal in the first revision released on or after July 28, 2027. The registry says that date is eligibility, that removal is a later decision, and that no feature has been removed under the policy yet. The lifecycle policy allows an expedited shortening to at least 90 days for an active security risk. No such shortening was on the registry. HTTP+SSE has no calendar day on that page.

Apple's Form 10-K, auditor's report dated November 3, 2026, warns that agents can act without authorization and that some consequences, such as deleting data or completing a transaction, may be hard to reverse. It does not describe a specific incident. The EU AI Act timeline dates December 2, 2026 for new prohibitions and an Article 50(2) transition, August 2, 2027 for national AI sandboxes, and December 2, 2027 for Annex III high-risk rules. On October 30, 2026 the UK Digital Regulation Cooperation Forum said existing law already applies to personal AI agents and that autonomy does not diminish the deployer's duty. A GOV.UK factsheet updated November 3 says four agentic loss-of-control measures will follow consultation and names no month. Parliament's bill page says Commons proceedings lapse at the end of April 29, 2027 under a November 4 carry-over motion. On November 5 Singapore's MDDI published a speech saying GovTech is developing GovHarness. The speech names no ship date.

## Likely

Anthropic's November 2 prospectus says: "We expect our use of short-term compute to continue to increase in the near term and to in turn compress our operating margin and Adjusted Operating Margin as a result." The phrase does not name a month. About $69.8 billion of commitments are due in the 12 months after September 30, 2026. That span includes this window through September 30, 2027, and does not cover October or November 2027.

Tencent's November 4 post says weights and system cards will be released in the coming days, and that Hy4 Flash is scheduled for release soon. The heading says Hy4 Flash was recently released; this report follows the body, which does not name a day. Citrix's "by the end of this month" covers the rest of November 2026 and does not name a day.

## Watch for

Citrix's November 4 announcement uses "will be able" and "will become" for two SecurAccess controls. The availability line puts those updates at the end of November 2026. OpenAI's computer-use page does not mention Linux. DeepSeek's README warns of compatibility-breaking changes and does not end the preview. Harmony Harness does not schedule a product. GovHarness has no ship date. The UK agentic measures have no month. Annex III high-risk rules are December 2, 2027, after this window.

## Month by month, November 2026 to November 2027

An empty announcement means no linked source named that month. It is not a prediction that the month will be quiet.

## Announced, likely, and watch-for notes by month

| Month | Announced | Likely | Watch for |
|---|---|---|---|
| November 2026 | Nov 2: Anthropic's amended S-1. The same day, the House of Lords finished third reading of the Cyber Security and Resilience Bill. Parliament's news page describes language and definition amendments, not a start date for agent rules. Nov 3: Apple's Form 10-K, AWS WorkSpaces for AI agents on Linux and Windows 11, and a GOV.UK factsheet update on agentic-AI measures that names no start day. Nov 4: Sysdig AI Defense general availability, DeepSeek Harness v0.2.2-rc.1, Tencent Hy4's API, Citrix SecurSpaces updates generally available, and a Commons carry-over motion that moves the bill's lapse date to the end of April 29, 2027. Nov 5: Singapore's MDDI speech says GovTech is developing GovHarness and describes an ARC framework. Neither has a launch day. OpenAI's computer-use page, read Nov 7, covers macOS and Windows. | Tencent's Nov 4 post still says weights and system cards in the coming days, and Hy4 Flash soon. The heading says Hy4 Flash was recently released; the body says it is scheduled for release soon, and this report follows the body. Neither sentence names a day. Citrix says the SecurAccess updates will be available by the end of November and does not name a day. Anthropic's filing expects short-term compute to keep rising in the near term and does not name a month. | Citrix still uses "will be able" and "will become" for two SecurAccess controls. OpenAI's computer-use page does not mention Linux. Whether Hy4 weights are public before December. GovHarness has no ship date. A later check should confirm the SecurAccess updates by November 30 or drop them. |
| December 2026 | Dec 2: EU AI Act timeline. New prohibitions on non-consensual sexual deepfakes and child sexual abuse material apply, and some providers already on the market before Aug 2, 2026 reach the Article 50(2) deadline. Tencent's 50 percent TokenHub discount on Hy4 runs through Dec 31. The WorkBuddy and CodeBuddy free window ended Nov 15, so it is not a December offer. | No source names a December product day. Tencent's "coming days" and "soon" are not pinned to December. Anthropic's "near term" sentence still has no month. December sits inside the 12 months after Sept 30, 2026, when about $69.8 billion of commitments come due. That span is not a December deadline. | Annex III high-risk rules are not a December 2026 event. The same EU timeline dates them Dec 2, 2027. |
| January 2027 | No page in this set names a launch day in January. | January sits inside the 12 months after Sept 30, 2026, when Anthropic says about $69.8 billion of commitments come due. That span runs through Sept 30, 2027, so January is not a deadline by itself. "Near term" is still not pinned to January. | A revised Anthropic filing that names a month for the short-term compute increase. The Nov 2 prospectus does not. |
| February 2027 | No dated agent launch was found for February. | February is inside the same commitment span and is not named as its own deadline. | Whether DeepSeek Harness has left developer preview. The README, read November 7 with the November 4 release still the newest, warns of compatibility-breaking changes and does not give a stable date. |
| March 2027 | No dated agent launch was found for March. | March is inside the commitment span and is not named as its own deadline. | Whether an official Harmony Harness code release appears. The October 10 paper does not schedule one. |
| April 2027 | The House of Commons carry-over motion of November 4, 2026 says proceedings on the Cyber Security and Resilience (Network and Information Systems) Bill lapse at the end of April 29, 2027, rather than at the end of November 11, 2026. That is a procedural expiry for the bill, not Royal Assent and not a start date for agent rules. | April is inside Anthropic's commitment span. The GOV.UK agentic-AI factsheet, updated November 3, still does not name April for the four measures it says will follow consultation. | The MCP registry's ordinary earliest removal is a revision released on or after July 28, 2027, so April is still inside that window. It is not a removal date. |
| May 2027 | No source names a May launch. The separate six-month report ends with May. This page does not. | May is inside the commitment span and is not a named deadline. | The next dated marks after May are July 28, 2027, for MCP eligibility, and August 2, 2027, for EU national AI sandboxes. |

| | | | |
|---|---|---|---|
| June 2027 | No source names a June launch. | June is inside the commitment span, which runs through September 30, 2027, and is not a named deadline. "Near term" is still not pinned to June. | Nothing in the source set is scheduled for June. The next dated marks are July 28 and August 2. |
| July 2027 | The MCP deprecated-features registry for the July 28, 2026 specification says Roots, Sampling, Logging, and Dynamic Client Registration become eligible for removal in the first revision released on or after July 28, 2027. That date is eligibility. Removal is a later maintainer decision. The registry, read November 7, says no feature has been removed under the policy yet. | July is inside the span through September 30, 2027, when about $69.8 billion of Anthropic's commitments are due. July 28 is not a payment date. | The lifecycle policy allows a shorter window, still at least 90 days, if maintainers approve an expedited removal for an active security risk. No such shortening was on the registry read November 7. |
| August 2027 | August 2: the EU AI Act Service Desk timeline says member states should have at least one AI regulatory sandbox operational. The timeline includes the Digital Omnibus amendments. | August is inside the commitment span through September 30, 2027. The sandbox date is a duty on member states, not a product launch. | Annex III high-risk rules remain December 2, 2027. They do not move into August. |
| September 2027 | No product launch is dated in September. September 30, 2027 is the last day of the 12 months following September 30, 2026, the span in which Anthropic's November 2 filing says about $69.8 billion of commitments are due. The filing does not say that sum is payable on September 30. | September is the last month inside that span. "Near term" is still not pinned to September. | A filing that breaks the $69.8 billion figure into named months. The November 2 prospectus does not. |
| October 2027 | No source names an October launch. | October is after the 12 months following September 30, 2026. The $69.8 billion sentence does not cover it. No undated phrase in this set is written to October. | Annex III high-risk rules are still December 2, 2027, after this report's window. |
| November 2027 | No source names a November 2027 launch. November 2027 is the end of this report's window. | Nothing in the source set is written to November 2027. The commitment span ended September 30, 2027. | The next EU date on the Service Desk timeline is December 2, 2027, for Annex III high-risk rules, which is after this window. Rules for high-risk AI embedded in Annex I products are dated August 2, 2028. |
